

Breast Cancer Screening Toolkit

Now Available: The ACR and SBI have created a **Breast Cancer Screening Toolkit** to assist radiologists in educating patients, referring physicians and other providers about the benefits of screening, as well as help them address questions, controversies and concerns that continue to surround this topic.

Please use the link below to access a variety useful resources, including patient-oriented materials, referring physician decision-aid documents and clinician education videos.

You may:

- Customize them with your branding (we've left a place for that in each item)
- Share with your referring clinicians and advise them of CME availability!
- Place patient materials on your website and in your waiting room
- Print and include in correspondence with patients and referring providers

Additionally, a for-radiologist-only PowerPoint is available on the ACR website, which you are free to use as an ACR member, in part or as a whole, to deliver educational presentations.

Please follow this link to access the materials:
